

## Effetto Mariposa Carbogrip and Carbomove

Add a non-slip surface to those smooth carbon bars and posts with Carbogrip. This high molecular silicone spray becomes a tacky clamping area after its five-minute set-up time, and will help to discourage over-tightening fixing bolts that can lead to damaging your carbon component. With anti-seize properties incorporated, this is not a permanent bond and making adjustments can be done as normal. It's waterproof, prevents corrosion and can be used on metal fasteners as a thread lock. Just watch where you spray it and clean up overspray immediately. For the parts that are already bonded or corroded together, Carbomove will help to free stuck components. Both Effetto Mariposa products are \$15 and made in Italy.
